Aluminium protective plates

Knapen Trailers, specialists in tailor-made solutions

Since 1984, we have focussed on continually improving a single product: the moving floor trailer. This type of trailer has proven to be an ideal and versatile form of transport in many sectors, including waste transport. We call our latest generation **NEXT**. This generation of trailers is full robot-welded, has been intensively trialled and is based on more than 34 years of experience. This allows us to guarantee our customers years of problem-free operation, the lowest total operational costs and the highest residual value. By pushing the boundaries, we have created an advantage in our branch for more than 34 years. We are proud of this and our customers can hold us to account about it.
